

InterSession

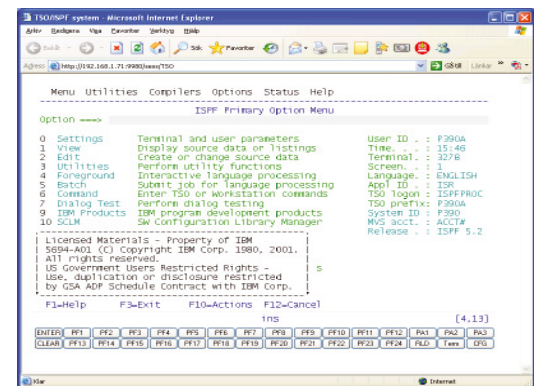

3270 Session Manager for z/OS, VSE and VM

InterSession is much more than a traditional session manager. Besides all the features you expect from such a product, InterSession has many unique features not found in any other session manager on the market.

The Web Gateway

A built-in web server makes it possible to access your 3270 applications using a web browser, without any extra software installed in the workstation. The Web Gateway runs completely within the mainframe and there is no middleware involved.

It is designed to be compatible with all leading modern browsers and uses cutting edge technology, such as Ajax and XHTML, when available.

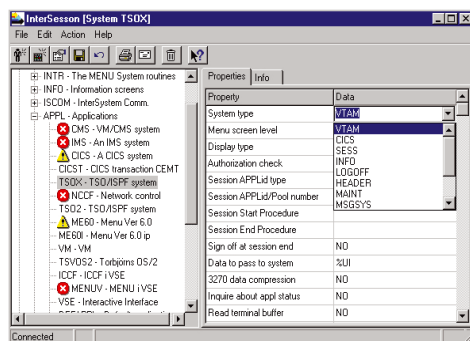

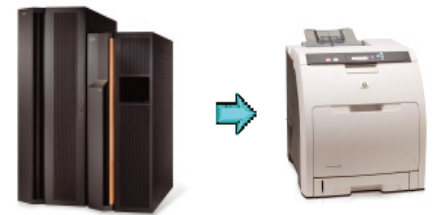

Full tn3270, both in- and outbound

You don't need SNA to access InterSession and your applications. With the built-in tn3270 server you can connect via TCPIP, and the tn3270 client allows you to use remote tn3270 applications as if they were local.

3270 print on your LAN printers

InterSession incorporates a print gateway which can route 3270 print to virtually any LAN printer on your network. This eliminates the need for conversion boxes.

Administration from a Windows workstation

InterSession/MENU has a unique Windows based administration client that uses TCP/IP to connect to the host. With this client, your administrators do not need special 3270 training. Your helpdesk can manage access to your 3270 applications without even having a 3270 terminal.

Increase Your Enterprise's ...

Productivity

InterSession has several features to increase productivity:

- **Built-in Web Server.** Access your 3270 applications from a web browser.
- **Multi Application Access.** The user can access as many applications as he/she is allowed to.
- **Scripting Facility.** Application logon/logoff can be automated with the scripting facility.
- **CICS Features.** Seamless CICS logon.
- **Print Anywhere.** Any 3270 or LAN printer can be set up as a hardcopy printer.
- **Print Gateway.** 3270 print can be routed to LAN printers. Works both for InterSession generated print and other (CICS etc) print.
- **Ad-Hoc Sessions.** Authorized users can start sessions to applications not defined by an administrator.
- **Flexible and Easy Administration.** Centralized and distributed administration is supported. Administration via the Windows client lowers the skills needed.
- **Message Switching.** Messages can be sent to individual users or groups of users.
- **Bulletin Boards.** Information screens can be used as bulletin boards.
- **Top Line Menu.** Immediate access to frequently used functions, such as session switching, printing and cut&paste.
- **Customizable Screens.** All end-user screens can be fully tailored to the user's needs.
- **NLS support.** Automatic codepage translation between applications and terminals.

Security

InterSession has several features to increase security:

- **All Security Systems.** RACF, CA-ACF2® and CA-Top Secret® on z/OS. BSM and ESM on VSE/ESA.
- **Terminal Lock Facility.** Terminals can be locked after invalid logon attempts.
- **Standby Features.** Inactive terminals can be set in standby mode.
- **Single Sign-on Ready.** Accepts pass tickets and can generate pass tickets for application signon.

Performance

InterSession has several features to increase performance:

- **Built-in TN3270.** Reduces CPU load and number of VTAM sessions. Allows access to other TN3270 hosts.
- **Multi-threaded Sign-On.** Slow operating system calls are multithreaded on z/OS.
- **Compression.** 3270 data can be compressed to reduce network traffic.
- **On-line Statistics.** Helps the Administrator to monitor or tune the system.
- **Accounting.** Accounting records are written to a VSAM file or to SMF.
